Nifty opened higher traded in a narrow range with positive bias to close in green. On the daily chart, we are observing an inside day formation which suggests that markets are cautious at current level. In coming trading session if nifty for first hour trades above 21636 then it may test 21700 - 21750 levels. On the downside, 21450–21325 levels may act as support for the day. Broadly, looking at the current price action it is evident that 21400 level remains make or break level. If breached on daily closing basis, then we may see further correction. On the flip side if 21400 holds then we may witness upside momentum toward prior high of 21800 & 22000–22300 levels in couples of weeks. Hence, one should adopt cautiously positive approach at current level as stock specific activity is likely to continue.
