Market Technical Outlook

Nifty, opened in red traded with negative bias, but in later half we witness smart recovery from lower levels and closed in green. We still maintain our stance that on the daily chart, 19300 to 19500 zone which was first acting as resistance may act as support for price (change of polarity). At present, prices have closed above the mentioned zone. Further, we are witnessing that prices are still trading above the 30-days moving averages, and we witness “Hammer” candlestick formation on daily chart, the pattern will activate only if we get close above yesterday’s high if it happen then we may see bounce back from current level. In coming trading session if nifty trades above 19630 level then it may test 19700 – 19790 levels. On the downside, 19500 – 19380 levels may act as support for the day.

Broadly, looking at current price action, it is evident that 19300 remains a make or break level. We still maintain our stance that a time wise consolidation or a minor correction from current level cannot be ruled out. Since, the trend remains up one needs to adopt buy on decline strategy. However, stock specific activity is likely to continue.
