Monthly Market Roundup

After a disappointing March, Indian equity markets started April month on a positive note. However, lingering fears of a trade war, as well as military action by the US on Syria, were seen as a major contributor to weakness on global equity markets. The concerns, however, appeared to fade after US President Donald Trump tweeted that a military strike on Syria may not be imminent. Benchmark indices logged strong gains as concerns over trade tensions between US and China ebbed. Market sentiments also got a boost from the news that RBI lowered inflation forecast for year ending 31 March 2019 amid higher growth projection. The India Meteorological Department (IMD) predicted a normal monsoon and continuous buying by domestic institutional investors also encouraged markets for upside rally.

The month finally ended with upward bias as S&P BSE Sensex delivered positive returns of 6.65% to settle at 35160.36 and Nifty50 gained 6.19% ending the month at 10739.35.

On the institutional side, foreign institutional investors (FIIs) sold Rs 5,552.21 crore worth of equities during the month while domestic mutual fund houses continued their buying spree with net purchases of Rs 10,077.63 crore in April 2018.

Market Outlook : May

Going ahead, Indian equity markets are expected to face major hurdles and will remain volatile till Lok Sabha elections. Widening fiscal and current account deficits, bank's NPA issues, strengthening dollar, higher crude oil prices and political uncertainties ahead of elections are key risks for markets. The Karnataka assembly election outcome on May 15 will be seen as a pointer to the general elections. Further, Q4FY18 corporate earnings, macroeconomic data, trends in global markets, US FOMC meeting, BOE monetary policy, FIIs and DIIs trend, bond

yield, rupee-dollar movement and crude oil prices are the major factors which will be monitored keenly. We suggest investors to invest in fundamentally strong companies with long term view.

Nifty Technical Outlook: May

The current price action on the monthly chart has taken support at the upward sloping trendline shown above in the graph and formed a bull candle. This suggests that monthly bias has turned positive.

In current month Nifty has resistance at 11053 – 11242 – 11462 levels whereas on the downside, 10425 – 10237 – 10016 levels. In coming month if Nifty trades above 10864 then it is likely to test 11053 – 11242 – 11462 levels. However, if Nifty trades below 10614 then it is likely to test 10425 – 10237 – 10016 levels.

Broadly, for current month 10237 remains crucial support as long as Nifty holds the above mentioned level there is high probability that Nifty may test 11053 – 11242 – 11462 in couple of months.

Economic Data Wrap Up – April

- India's Mar Nikkei manufacturing PMI fell to 51 from 52.1 in Feb.
- India's Mar Nikkei services PMI rose to 50.3 from 47.8 in Feb
- India's Feb IIP growth fell to 7.1% from 7.4% in Jan.

Company Overview

Development Credit Bank Ltd (DCB) is one of the emerging private sector banks in India. The bank is amongst the first private sector banks to waive advisory fee and service charge for mutual fund investments. The services offered by the bank include Personal Banking- under this segment; they offer saving accounts, deposit scheme, current accounts, personal loans, housing loans, phone banking facility, mutual funds, demat account, life and general insurance etc. Corporate banking - In this they offer products and services from large corporates to

small and medium enterprises. NRI banking- they offer products and services to NRI clients such as remittances services, western union money transfer, loans against term deposit, currency exchange etc.

Investment Rationale

DCB Bank has shown a strong growth across parameters during the last quarter.

- Its cost to income ratio, which is a measure of its operational efficiency, improved by 5% over 3 months.
- Its Net Interest Income has grown by 20% YoY. Their PAT increased by 21% YoY.
- Its NIMs stood at 4.16% (an increase of 12 bps QoQ).
- Gross NPA stood at 1.79% and Net NPA stood at 0.72%.
- PCR has been maintained well at 75%. That is well above the macro prudential measure recommended by RBI (i.e. 70%).
- Its CAR stood at 16.47%, Tier 1 at 12.72% and Tier 2 at 3.75%.

Outlook & Valuation

We believe they made a remarkable turnaround in a tough environment by reporting a steady improvement in most of the parameters. DCB is well placed in terms of capital adequacy and asset quality, which has been a major concern during the last quarter of the banking industry. They also have adequate capital to pursue further growth opportunities.

We have a target of Rs.227, valuing the stock at 2.1x to its FY20E ABV.

Company Overview

Manappuram Finance Ltd. is one of India's leading gold loan NBFCs mainly engaged in providing retail advances against gold ornaments. It has 4152 branches across 28 states/UTs with assets under management (AUM) of Rs. 14,650 crore of which its gold AUM stands at Rs. 11,328 crore as on 31st December 2017. Over the last two years, the company has diversified into new business areas like microfinance, vehicle and housing finance, and SME lending. It acquired a majority stake (85%) in Asirvad Microfinance Pvt. Ltd. It provides hassle-free gold loans to its customer. The company mainly focused on three main

areas, affordable housing finance, commercial vehicle loans and microfinance.

Key Investment Rationale:

MFL reported healthy growth in Q3FY18, its NII for the quarter stood at Rs. 624 crore vs Rs. 594 crore sequentially and PAT for the quarter at Rs. 173 crore.

- Revival in AUM with Increase of Non-Gold Portfolio:** MFL AUM stood at Rs. 14650 crore as on 31st Dec, 2017 with an increase in its non-gold portfolio which is approximately 23% of its total AUM. We have seen revival in AUM and expect proportion of non-gold portfolio will continue to grow ~30% by FY19, with majority of it arising from microfinance and moderate growth of 10% for gold loan business.
- Superior Assets Quality:** MFL had lower gross and net NPA levels of 0.7% and 0.4% respectively in Q3FY18 backed by its strategy of recovery from gold auctions and de-risking gold loans. The Capital Adequacy Ratio as on Dec 2017 was 27.8%.
- Diversification of Business Model:** MFL had commenced its business in Gold financing but later it had diversified its portfolio and moved on to Non-gold portfolio in Commercial Vehicle Finance, Microfinance, Home Finance, Insurance broking etc.
- De-risking of Gold Business:** MFL has recalibrated its gold loan product structure to de-Link from gold price fluctuations. Company has realigned its long term gold loans into several shorter tenures which has resulted in lesser NPA risk as well as provided insulation from gold prices.

Outlook & Valuation

With some stability in gold prices post demonetization, management targets to increase its gold loan book around 10%. We have an "Accumulate" rating on the stock with a target of Rs 142; valuing the stock at 3.1x FY19E adjusted book value of Rs. 45.8.

Commodity Outlook

SILVER LINING !

SILVER

BUY

CMP: Rs 39504 (As on 02nd May 2018)

Buy: Silver July Contract above Rs 40000

Targets: Rs 41200-42100

Stop Loss: Rs 39150

Silver is trading in a range bound & sluggish manner since a long time. The dull phase has actually distorted the consolidation and thus we have a very uneven chart structure that fails to get identified by established graphical patterns. However, this kind of situation, irrespective of how difficult it seems to be, provides the right opportunity for trading as it is the route (path) that usually remains untraveled till the midpoint of the journey arrives. These unlikely & tough situations in trading have certain amount of hope intact in themselves and there lies the 'silver lining'...

On monthly chart of London Spot Silver, the uneven consolidation can be seen in the form of candlesticks with long upper & lower shadows within a trading range of \$18.65-\$14.31 in last one and a half years. \$16.00 broadly acted as a key support as the lower point at \$14.31 came like a 'blink & you miss' appearance & prices quickly recovered to close well above \$15.50 the same day. On weekly chart, we can see a huge trend line resistance getting breached a couple of weeks ago. However, prices went into 'traders' remorse' stage soon after and are now near a double bottom at & \$16.00 that also is a major 'Gann Square' support.

On daily chart, we can see momentum indicators like RSI, MACD & ADX losing their direction unlike on monthly chart where they are pointing towards a mid-term relief rally. All in all, we definitely have a buy set-up for mid-term traders BUT patience is the key here as all these silver linings may take some more time to give desired results. Traders who like to see themselves as 'early birds' can **Buy Silver MCX July contract above Rs.40000 for targets in the range of Rs 41200-42100. Maintain stop loss at Rs 39150.**

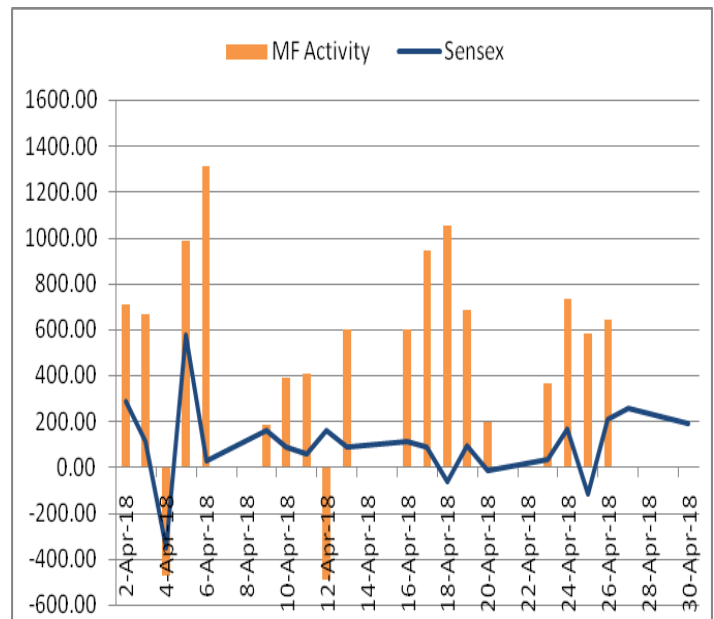

MUTUAL FUND ROUNDUP

Indian equity markets ended on positive note in April 2018. The barometer index, S&P BSE Sensex and Nifty50 delivered positive return of 6.65% to settle at 35160.36 and Nifty50 gained 6.19% ending the month at 10739.35.

MF ACTIVITY

Indian mutual funds turned net buyers of equities to the tune of Rs 10,077.63 crore in the month of April 2018. Highest buying was recorded in the third week of the month when the fund houses made total net buy of Rs 3,479.74 crore of equities. On the other hand, foreign institutional investors (FIIs) sold Rs 5,552.21 crore worth of equities in April 2018.
